

ABSTRACT

A control system for a motor vehicle is provided. The control system includes a manual actuating device with a plurality of degrees of freedom of adjustment for selecting and/or activating entries in a menu structure with a plurality of menu levels and a screen display having one or more display areas for displaying the menu structure, each display area including at least one field for displaying one of the entries. To display entries in at least one menu level of the menu structure, a plurality of fields in a matrix structure including a plurality of columns and a plurality of rows which can each be selected by a cursor are arranged in at least one display area of the screen display, in which only one entry is arranged in each of the columns or in each of the rows.
